FOR IMMEDIATE RELEASE

New Family of Timing Lights Available from Actron®

CLEVELAND, OH, November 1, 2005 -- Actron®, a leading manufacturer of automotive diagnostic tools, introduces a new family of timing lights with the right models everyone from occasional do-it-yourselfers to serious mechanics. Three new models – Inductive Timing Light (CP7527), Advance Timing Light (CP7528), and Digital Advance Timing Light (CP7529) – offer basic to full-featured functions and options.

All three new Actron Timing Lights can be used for conventional, electronic, and computer controlled ignition systems. Each comes standard with: all metal inductive pick up; super bright Xenon flash; one-touch control; durable, plated ABS housing; heat resistant over molding on battery clips; a detailed instruction manual; and a one year warranty.

The Inductive Timing Light is designed for standard base timing. It features On/Off touch control and can be used with DIS and 2 cycle systems. The Advance Timing Light allows accurate adjustment of base and advance timing reading. It also features On/Off

- more -

computer advance.

The Digital Advance Timing Light has advanced features with a bright LED screen and mode indicator lights. This robust timing light has microprocessor-controlled circuitry, digital LED readout tachometer and advance display, a unique flashlight feature button, 2/4 cycle and RPM/advance lights, and up and down scroll buttons.

Correct ignition timing is essential for achieving maximum fuel economy and performance from spark ignited engines.

“Although conventional distributor ignition systems are only found on older cars, using a timing light to check computer timing is very viable when determining the cause of engine problems,” Joe Young, Product Manager for Actron, explains. “Of course, there are still lots of older cars out there with distributor ignition systems.”

For additional information regarding Actron’s new family of timing lights and other Actron precision electronic solutions, contact your Actron representative or call (800) 228-7667. Product information is also available online at www.actron.com.

Actron, a business unit of SPX Service Solutions, continues its 40-year tradition as a leading manufacturer of cost-effective, high-performance automotive diagnostic and test equipment. Actron’s innovative products are the tools of choice for do-it-yourselfers.

SPX Service Solutions designs, manufactures and markets a fully integrated family of global brands providing specialty service tools, advanced diagnostic and shop equipment, inspection and gauging systems, training and technical information for vehicle servicing and maintenance.

SPX Corporation is a global provider of technical products and systems, industrial products and services, flow technology, coding technologies and services, and service solutions. The Internet address for SPX Corporation’s home page is www.spx.com.
